Travel Pillow Design Project Grading Rubric

	Developing Proficiency	Approaching Proficiency	Demonstrating Proficiency	Exceeding Proficiency
Proper Use of Tools/ Equipment	Potential harm or injury could result from your use of tools and equipment in class; you were UNSAFE with the equipment	Hmm...you seemed unsure and didn't ask for help or went ahead without asking	Pretty good, just a little unsure of threading the machine or using a hand needle (using lab equipment and tools was pretty good but needed a little help)	Wow! You applied what you saw in the demonstration & could teach about the equipment to another student
Accuracy	Hmm...your project didn't really resemble a pillow in the end, or the stitching was so uneven it was unrecognizable	Well, the pillow size was incorrect due to inaccurate measurement or the shape of the pillow was off due to uneven stitching	The pillow is the proper size & shape and the hand stitching appears to be able to hold to final hole closed well	Excellent work! It looks very straight and even. Your stitching is consistent, the hand stitching demonstrates slow concentrated work
Time Management	Your project was late, mostly because you were not using your class time well	You spent about half of your time off task, but still managed to complete your project in the class time allotted	You used your time wisely, except a few times you got distracted	You used all of your class time very well for completing this project and used any extra time restoring and/or helping others
Restoration	I watched while everyone else restored	Ms. Emily had to tell me what to do before I did it.	The machine lid is on, powered down, no threads on desk or floor, no material scraps present, all items restored	Your area shows no signs of evidence that you were sewing and you worked until the entire classroom was restored

TRAVEL PILLOW GRADING RUBRIC POINTS: _____/100 points

TEACHER EVALUATION POINTS: _____/100 points

GRAND TOTAL FOR TRAVEL PILLOW: _____ / 100 points
